TRACER POA&M and Remediation Tracker

Corrective action plan for selected portfolio findings

Prepared by **Mallory Davis**

System	TRACER - Training Records and Compliance Evidence Repository
Fictional organization	Arclight Mission Systems
Prepared by	Mallory Davis
Purpose	Convert selected findings and risks into corrective actions with owners, dates, milestones, escalation triggers, and closure evidence.
Status	Fictional portfolio work sample. Not an official federal POA&M.

Remediation standard: An item is not closed because someone said it is complete. It is closed when the corrective action is done and the evidence is sufficient for a reviewer to verify the outcome.

1. POA&M tracking rules [Back to TOC](#)

- Every item must link to a finding or risk scenario.
- Every item needs a responsible role, target date, and milestone path.
- Every item needs defined closure evidence.
- Aged or blocked items require explicit escalation.

2. Open POA&M items Back to TOC

ID	Weakness	Source	Owner role	Priority	Status	Target	Closure evidence
P-01	Privileged break-glass access evidence is incomplete.	F-01 / R-01	ISSO support with System Administrator	High	In progress	30 days	Approved break-glass procedure, sample use record, MFA evidence, quarterly review log.
P-02	Audit log review cadence is not consistently evidenced.	F-02 / R-02	ISSO	Moderate	Open	30 days	Weekly review template, three consecutive review records, escalation note for missed review.
P-03	High vulnerability remediation escalation is fragmented.	F-03 / R-03	System owner with security operations	High	Open	15 days	Single tracker showing item age, owner, due date, decision record, closure evidence.
P-04	Tabletop action items lack closure proof and follow-up cadence.	F-04 / R-04	Incident response coordinator	Moderate	Open	45 days	Action log with owners, completion criteria, proof files, and closure confirmation.
P-05	Monitoring inputs are not consolidated into one posture view.	F-05 / R-05	System owner with GRC support	Moderate	Planned	45 days	Monthly posture summary combining findings, scan status, POA&M state, and decisions required.

3. Milestone tracker Back to TOC

POA&M	Milestone	Target	Expected result
P-01	Draft privileged exception standard	Week 1	Define approval, MFA, and review requirements.
P-01	Validate evidence package on two sample events	Week 3	Confirm the record supports reperformance.
P-02	Deploy weekly log review template	Week 1	Require reviewer, date, scope, result, and exception fields.
P-02	Complete three consecutive weekly reviews	Week 4	Use as initial evidence of cadence.
P-03	Consolidate high vulnerabilities into one tracker	Week 1	Establish owner and aging visibility.
P-03	Resolve or escalate aged high items	Week 2	Record remediation or formal decision path.
P-04	Define closure criteria for tabletop actions	Week 2	Assign measurable completion proof.
P-05	Issue first monthly posture summary	Week 6	Present findings, scans, POA&M status, and decisions needed.

4. Escalation criteria Back to TOC

Trigger	Required response
Target date missed for a high-priority item	Escalate to the system owner and document the revised risk decision.
Evidence produced but not sufficient for review	Keep the item open and specify what proof is missing.
Corrective action depends on another team	Record the dependency and identify the decision owner.
Control weakness widens in scope	Reassess the related risk scenario and update the POA&M priority if needed.

5. Closure standard Back to TOC

- Closure evidence must show what changed, who approved it when approval is required, and how the result was verified.
- A ticket marked complete is not sufficient by itself unless the ticket contains the required proof.
- Items with temporary workarounds remain open until the underlying corrective action or documented treatment decision is complete.
- The POA&M should align with the risk assessment so management can see which open items affect the highest priorities.

6. Relationship to the portfolio package Back to TOC

The POA&M is the execution bridge between assessment findings and management confidence. It translates the TRACER control assessment and risk assessment into accountable remediation work that can be reviewed, escalated, and closed.
