GRC and RMF Portfolio

Cyber Risk, Controls, and Remediation

Prepared by **Mallory Davis**

Purpose: This portfolio demonstrates applied understanding of cyber risk assessment, control documentation, evidence-based findings, remediation tracking, and RMF-aligned system artifacts. It is built for hiring teams reviewing GRC Analyst, cyber risk, RMF support, and ISSO-adjacent capability.

1. Recommended review path [Back to TOC](#)

Time available	Recommended path	What it proves
10 minutes	Read the Cyber Control Readiness Internal Audit Case Study executive summary and finding structure.	Risk judgment, control evidence logic, remediation decision framing.
20 minutes	Add the TRACER SSP and Security Controls Assessment overview sections.	System context, control implementation reasoning, assessment approach.
30 to 45 minutes	Read the TRACER Risk Assessment Report and POA&M after the SSP and assessment.	Risk analysis, treatment logic, closure standards.
Optional context	Review the Career Transition Brief and Skills Translation Matrix.	How prior operations work supports the target role without overstating experience.

2. Portfolio map Back to TOC

Order	Artifact	Primary signal	Best reviewer
01	Cyber Control Readiness Internal Audit Case Study	Contractor-facing audit logic from scope through remediation and management decisions.	Recruiter, hiring manager, GRC lead
02	TRACER System Security Plan Case Study	System boundary, data context, selected control implementation, inherited dependencies.	RMF lead, ISSO, compliance reviewer
03	TRACER Security Controls Assessment Case Study	Assessment methods, control status, evidence review, findings.	ISSO, assessor, cyber risk reviewer
04	TRACER Risk Assessment Report Case Study	Threat reasoning, likelihood and impact analysis, risk treatment logic.	GRC lead, risk manager
05	TRACER POA&M and Remediation Tracker	Corrective action planning, milestone tracking, closure criteria, escalation triggers.	ISSO, GRC manager, program lead
06	Career Transition Brief	Concise career positioning from operations into GRC and RMF work.	Recruiter, hiring manager
07	Skills Translation Matrix	Direct mapping from prior work habits to portfolio proof and role-relevant capability.	Recruiter, career coach, interviewer

3. How the work samples fit together Back to TOC

- The internal audit case study shows enterprise-facing GRC work: scoping, evidence sufficiency, findings, and remediation decisions.
- The TRACER set shows system-focused RMF execution: system documentation, control assessment, risk assessment, and POA&M tracking.
- The candidate context documents explain the career transition without being positioned as technical proof.

4. Presentation rules for this portfolio Back to TOC

- Every technical artifact is fictional and presented as a work sample, not a claim of prior agency work or authorization authority.
- The documents focus on analysis, traceability, and clear decisions. They avoid signatures, official-looking approvals, and unsupported certainty.
- The strongest portfolio signal is the link between evidence reviewed, risk identified, corrective action proposed, and closure proof required.
