

DOSSIER 001 - AI STRESS TEST

Three weeks before a client status meeting, a project manager asked me whether we could "let the AI draft the evidence narrative." Here is what I told her.

AI is not a shortcut around governance.
It is a stress test for whether governance exists at all.
It makes weak governance easier to see.

When ownership is unclear, AI scales confusion.
When review is missing, AI scales risk.
When boundaries are loose, AI scales exposure.

Decision Prompt:
What cultural behavior will this AI system amplify: discipline, avoidance, or ambiguity?
